

BOVINE HOOF LESION IDENTIFICATION AND SEVERITY SCORE SHEET

| Severity Score | A = Abscess | B = Bruise | C = Corn | D = Dermatitis / Heel wart | E = Erosion / Slurry Heel | F = Fissure | G = Digital Sepsis |
|---------------------|---|---|---|---|---|---|---|
| | White Line Abscess | White Line Hemorrhage | Interdigital Hyperplasia | Digital Dermatitis | Heel Horn Erosion | White Line Fissure | Deep Digital Sepsis |
| 1 = Mild |  |  |  |  |  |  |  |
| | <i>Small amount of pus, not extending to coronary band</i> | <i>Localized redness in white line of outer claw</i> | <i>Grape size growth between claws</i> | <i>Small dime size moist area in interdigital cleft</i> | <i>Small pock marks of erosion or small fissure</i> | <i>Small fissure in white line close to heel</i> | <i>Obvious signs of sepsis from a complicated sole ulcer (severe)</i> |
| 2 = Moderate |  |  |  |  |  |  |  |
| | <i>Large amount of pus, but does not emerge at coronary band</i> | <i>Diffuse redness in white line of one or both claws</i> | <i>Growth larger than a grape, but confined between claws</i> | <i>Strawberry granuloma larger than a dime</i> | <i>Single large fissure across entire heel</i> | <i>Wide fissure, but does not extend to coronary band</i> | <i>Asymmetrical swelling around coronary band (severe)</i> |
| 3 = Severe |  |  |  |  |  |  |  |
| | <i>Pus emerging at coronary band</i> | <i>Diffuse hemorrhage with separation</i> | <i>Large tumor-like corn</i> | <i>Verrucose tentacles growing out of granuloma</i> | <i>Multiple fissures extending across heel with extensive erosion</i> | <i>Large fissure extending to coronary band without pus</i> | <i>Separation around coronary band (severe)</i> |

BOVINE HOOF LESION IDENTIFICATION AND SEVERITY SCORE SHEET

| Severity Score | H = Hemorrhage | P = Phlegmon / Foot Rot | S = Sole Fracture / Heel Ulcer | T = Toe Ulcer | U = Ulcer | V = Vertical Wall Crack | Y = Horizontal Fissure / Thimble |
|-------------------------|---|---|---|--|---|---|---|
| | Sole Hemorrhage | Interdigital Necrobacillosis | Sole Fracture | Toe Ulcer | Sole Ulcer | Vertical Fissure | Horizontal Fissure |
| 1 = Mild |  |  |  |  |  |  |  |
| | <i>Superficial hemorrhage in typical site</i> | <i>Slight separation of interdigital skin with little swelling</i> | <i>Small fissure at junction of heel and sole not extending into heel</i> | <i>Small fissure at white line in toe area</i> | <i>Deep hemorrhage with exposure of corium less than dime area</i> | <i>Wall crack without associated pain</i> | <i>Small fissure on one claw</i> |
| 2 = Moderate |  |  |  |  |  |  |  |
| | <i>Deep hemorrhage in typical site</i> | <i>Split in interdigital skin with swelling confined between claws</i> | <i>Large fissure with underrun sole confined to heel area</i> | <i>Disintegration of sole horn in toe area extending to corium</i> | <i>Exposed corium more than a dime</i> | <i>Painful crack starting at coronary band</i> | <i>Small fissure on both inner and outer claw</i> |
| 3 = Severe |  |  |  |  |  |  |  |
| | <i>Diffuse extensive hemorrhage across sole</i> | <i>Deeply erosive lesion with swelling around the coronary band</i> | <i>Separation of a large area of sole</i> | <i>Widespread necrosis of corium in the toe extending to bone</i> | <i>Prolapse of corium through full thickness defect</i> | <i>Painful crack extending from coronary band to toe to depth of corium</i> | <i>Large fissure on both inner and outer claw within 1.25 inches of sole surface</i> |
